

WHAT IS BIORETENTION?

Enhance your soil with Certified™ Harvest Blend Compost®

OUR STANDARDS

1. QUALITY TESTING
2. NATURAL PROCESS
3. HEAT SANITIZED
4. WEED FREE
5. PERMITTED SITE
6. MONTHLY INSPECTIONS
7. CERTIFIED BY SEAL OF TESTING ASSURANCE PROGRAM

COMPOST INCREASES

- SOIL ORGANIC MATTER
- WATER HOLDING CAPACITY
- SOIL HEALTH
- SOIL NUTRIENTS

Bioretention typically looks like conventional landscapes however they are specially designed to slow, treat and infiltrate storm water runoff. Bioretention systems are designed to capitalize on the benefits of using compost based soils that promote vigorous plant growth, have excellent water holding capacity and captures pollutants and heavy metals.

WHAT IS BIORETENTION SOIL?

A specific blend of a combination of washed concrete sand and mature STA certified compost. The organic filter is a compost based soil designed to remove pollutants through infiltration and plant absorption. The primary goal of the soil is to filter out petroleum-based products, heavy metals and other unwanted materials from storm water while promoting robust plant growth to further remove pollutants. The bioretention system will trap and remove suspended solids and filter or absorb pollutants to soils and plant material. The high water holding capacity of the compost in the soil means that a large amount of the storm water will remain on site while the excess water will have been filtered before being released to the municipal storm water system.

WHY CHOOSE HARVEST BLEND COMPOST® FOR YOUR BIORETENTION SOIL?

- EG Facility is fully permitted
- Our compost is STA certified so you know you are getting high quality
- Our compost has gone through a full compliance period, active period and curing phase so we can guarantee you that you are receiving high quality mature compost.
- We measure and mix our compost on our site to create the perfect ratio for BSM material.
- Our BSM material is thoroughly mixed with our scarabs for uniform final product.
- We are here to support our product with compost test results, permeability and BSM growth test.

HARVEST BLEND COMPOST® HAS EARNED THE STA CERTIFIED™ COMPOST LABEL!

Organic matter, vital to soil health, is transient in nature and must be continually replenished. Locally produced, recycled organic matter is abundantly available to do just that, in the form of compost. Our compost products have passed rigorous testing to earn the US Composting Council's Seal of Testing Assurance (STA) Certified Compost™ label, ensuring the right product for every project (*test results available upon request*).
